

8/24/16

FT-991 Firmware Update and Version Identification

The latest versions are listed below with the release dates.

- MAIN Firmware Version **02-14** (08/24/16)
- TFT Firmware Version **02-03** (08/24/16)
- DSP Firmware Version **01-05** (12/01/15)
- C4FM DSP Firmware Version **04-10** (02/03/16)

*If you already have MAIN: Ver. **02-14**, TFT: Ver. **02-03**, DSP: Ver. **01-05** and C4FM DSP: Ver. **04-10** firmware versions, it is not necessary to update the FT-991 again.

There are four different firmware installations. Each one must be followed carefully. Installing the wrong type firmware may cause difficulties. Check your radio before installing firmware to be sure which updates are needed. **Please read the FT-991 Firmware Upgrade Manual before proceeding.**

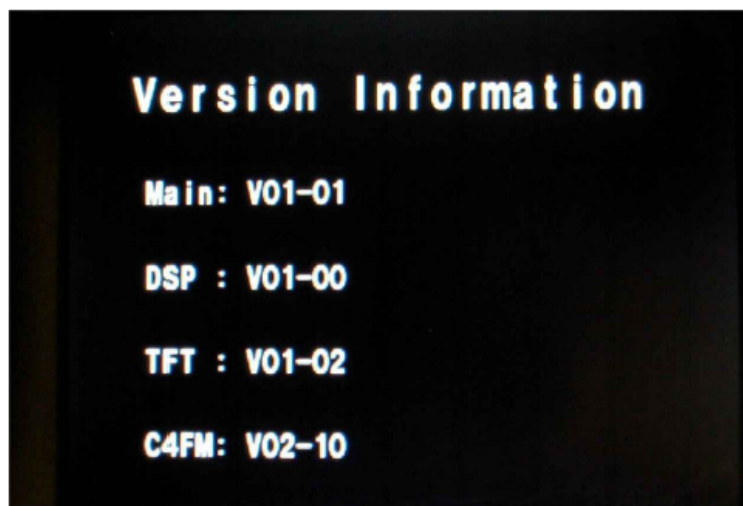

If multiple firmware installations are required the **MAIN** firmware should be installed first, as it is the only one that requires a press and hold in the [F(M-LIST)] key while turning the radio back on. This resets the radio and locks in the new firmware.

Before installing new firmware, please verify your current version firmware with the following procedure:

How to Confirm the Firmware Version

Press and hold the [POWER] key to turn on the transceiver, while pressing and holding the [A=B] key, and [A/B] key on the transceiver's main panel.

The versions of each firmware will be displayed on the TFT screen.
