FTᴅx1200 Firmware Update and Version Identification

The latest versions are listed below with the release dates.

- MAIN Firmware Version **01-13** (08/24/16)
- TFT Firmware Version **02-01** (08/24/16)
- DSP Firmware Version **05-55** (01/26/16)

*If you already have MAIN: Ver. **01-13**, TFT: Ver. **02-01** and EDSP: Ver. **05-55** firmware versions, it is not necessary to update the FTDX1200 again.

There are four different firmware installations. Each one must be followed carefully. Installing the wrong type firmware may cause difficulties. Check your radio before installing firmware to be sure which updates are needed.
If multiple firmware installations are required the **MAIN** firmware should be installed first, as it is the only one that requires a press and hold in the [FAST] and [LOCK] keys while turning the radio back on. This resets the radio and locks in the new firmware.

Before installing new firmware, please verify your current version firmware with the following procedure:

How to Confirm the Firmware Version

Press and hold the [POWER] key to turn the transceiver ON, while pressing and holding the [GEN] key, [50] key, and [ENT] key on the transceiver main panel.
The version of each firmware will be displayed on the TFT screen.

Version Information

Main: V01-02

DSP : V05-44

TFT : V01-00

FFT : V81-00
